

Abstract:

**Method For Monitoring A Measuring Instrument, In
Particular A Flow Meter And A Measuring Device For
5 Carrying Out Said Method**

The invention relates to a method for monitoring a measurement device, in particular a flow measurement device, and to a measurement device itself. In order in
10 this case to reliably preclude measurement errors resulting from incorrect installation, the invention proposes that a characteristic variable is calculated from a time series $s(t)$ of the measurement signal of a measurement device and is compared with previously
15 recorded reference values, with this being used as the basis to automatically generate a message as to whether the measurement device has been installed correctly or incorrectly.
